

YouTube Trending Dashboard

1. Introduction

The YouTube Trending Dashboard is an interactive data visualization project designed to present YouTube trending-content information in a simple and easy-to-understand format. The dashboard helps users explore views, likes, comments, channels, titles, categories, countries, and publishing information through interactive visuals and filters.

2. Abstract

This project converts YouTube trending data into meaningful visual insights using Power BI. The dashboard contains KPI cards for key totals and interactive charts for analyzing views by category, channel, title, and country. It also provides slicers for category, channel, comments, publish date, title, and trending-date information, allowing users to filter the dashboard and examine specific segments of the data.

3. Tools Used

Tool / Technology	Purpose
Power BI Desktop	Dashboard creation, data modeling, and visualization
Power Query	Data cleaning and transformation
DAX	Measures and calculated KPIs
Excel / CSV	YouTube trending data source

4. Steps Involved in Building the Project

- Collected and loaded the YouTube trending dataset into Power BI.
- Cleaned and transformed the data using Power Query, including checking data types, missing values, duplicates, and inconsistent entries.
- Prepared the data model and created required calculated measures using DAX.
- Created KPI cards for channel count, comments, likes, views, and titles.
- Created visuals to analyze views by category, channel, title, country, and other available dimensions.
- Added interactive slicers for category, channel, comments, publish date, title, and trending date.
- Formatted the dashboard with a consistent dark theme, clear titles, labels, and an organized layout.
- Tested slicers and visuals to ensure the dashboard responds correctly to user selections.

5. Conclusion

The YouTube Trending Dashboard provides a clear and interactive way to understand trending-video data. It enables users to compare views across categories, channels, titles, and countries while filtering the data by important dimensions. The project demonstrates practical skills in Power BI, data preparation, DAX, visualization, and interactive dashboard development.
