

HR Analytics Dashboard

1. Introduction

The HR Analytics Dashboard is an interactive Power BI project designed to analyze employee information and present important human resource insights in a simple visual format. It helps HR teams understand workforce distribution, employee attrition, salary trends, experience, training, performance, and other key employee-related metrics.

2. Abstract

This project converts employee data into meaningful business insights using Power BI. The dashboard provides KPI cards and interactive charts for total employees, average salary, attrition count and percentage, average experience, and average training. It also analyzes employees by department, gender, location, designation, performance, joining year, training hours, leave days, experience, and salary. Slicers for Department, Gender, Location, Designation, Attrition, Performance, and Join Year allow users to filter the dashboard and explore specific employee segments.

3. Tools Used

Tool / Technology	Purpose
Power BI Desktop	Dashboard creation, data modeling and visualization
Power Query	Data cleaning and transformation
DAX	Measures and calculated KPIs
Excel / CSV Data	Source employee dataset

4. Steps Involved in Building the Project

- Collected and loaded the employee dataset into Power BI.
- Cleaned and transformed the data using Power Query by checking data types, missing values, duplicates, and inconsistent entries.
- Created required relationships/data structure and prepared calculated measures using DAX.
- Created KPI cards for total employees, average salary, attrition count, average experience, average training, and attrition percentage.
- Added charts to analyze department, gender, location, designation, performance, joining year, training hours, leave days, experience, and salary.
- Added interactive slicers for Department, Gender, Location, Designation, Attrition, Performance, and Join Year.
- Formatted the dashboard with a consistent theme, titles, labels, and layout for clear presentation.
- Tested the filters and visuals to ensure that the dashboard responds correctly to user selections.

5. Conclusion

The HR Analytics Dashboard provides a clear and interactive view of workforce data. It enables HR professionals and decision-makers to quickly identify employee trends, compare departments, monitor attrition, and understand salary, performance, experience, training, and leave patterns. The project demonstrates practical skills in Power BI, data cleaning, DAX, visualization, and business-oriented data analysis.
